Full Stack Software Engineer for Local Deals
Full-time freelancer anywhere who works during US business hours

Seasoned Full Stack Software Engineer with great skills in Javascript (including NodeJS and preferably VueJS), PHP, GraphQL and REST APIs, CouchDB, MySQL, and Wordpress.

Work on a fast-paced, collaborative team that is blending an exciting mix of technologies that will help millions of consumers save money.

Responsibilities

- As a hands-on developer design, code, develop and support web applications.
- Develop UI providing higher levels of user experience using Javascript and/or VueJS.
- Develop high performance REST APIs.
- Write unit level and integration level testing.
- Follow standards for development of tools and experiences, with focus on performance, scalability, and reusability.
- Perform quality assurance on all new code from inception through integration, staging, and production environments.
- Collaborate effectively with team members as well as UX, QE, and release engineering team.
- Rapidly execute on solutions when problems or challenges have been identified.
- Consistently demonstrate ownership and on time delivery.
- Design and develop micro-services and medium-sized applications with little direction.

Required Skills

- Bachelor's degree from an accredited university in a Computer Science or equivalent work experience
- Extensive use and understanding of Javascript and Open API Specification (Swagger).
- 5+ years of professional experience as a web developer with the ability to demonstrate previous work experience.
- At least 4 years experience with Front End Libraries and Frameworks like React/VueJS.
- At least 4 years experience with Javascript.
- At least 4 years experience with API integrations (REST, GraphQL).
- At least 4 years experience with PHP.
- At least 4 years experience with SQL and NoSQL Databases, ideally CouchDB.
- At least 4 years experience with markup and layout (HTML5, CSS3).
- Experience in working with and incorporating CSS frameworks (Foundation, Bootstrap).
- Experience with CSS pre-processing and optimization.
- Experience with module bundling tools like Webpack and gulp.
- A demonstrable understanding of MVC and MVVM patterns.
- Excellent understanding of Object-Oriented Programming concepts.
- Experience with a Version Control system (Git).
- Experience with cross-browser design and functional constraints.
- Experience working with Continuous Integration/Continuous Deployment technologies such as Jenkins and Docker.
- Direct experience with or exposure to testing in an Agile delivery model.
- Experience with testing techniques and tools related to web development technologies.
- Experience working in AWS / cloud environments, leveraging managed services.

- Highly organized and self-directed. Comfortable being very proactive about asking for help.
- Highly collaborative in a team environment. Always happy to help others if needed.
- Ability to clearly communicate and work with business and technical co-workers.
- Fluent or near-native English speaker
- Eager to work in a fast-paced, high-energy team environment with aggressive deadlines and a strong work ethic
- Comfortable working with requirements that change based on user feedback
